Creation Date

Dec 15, 2025

Last Updated

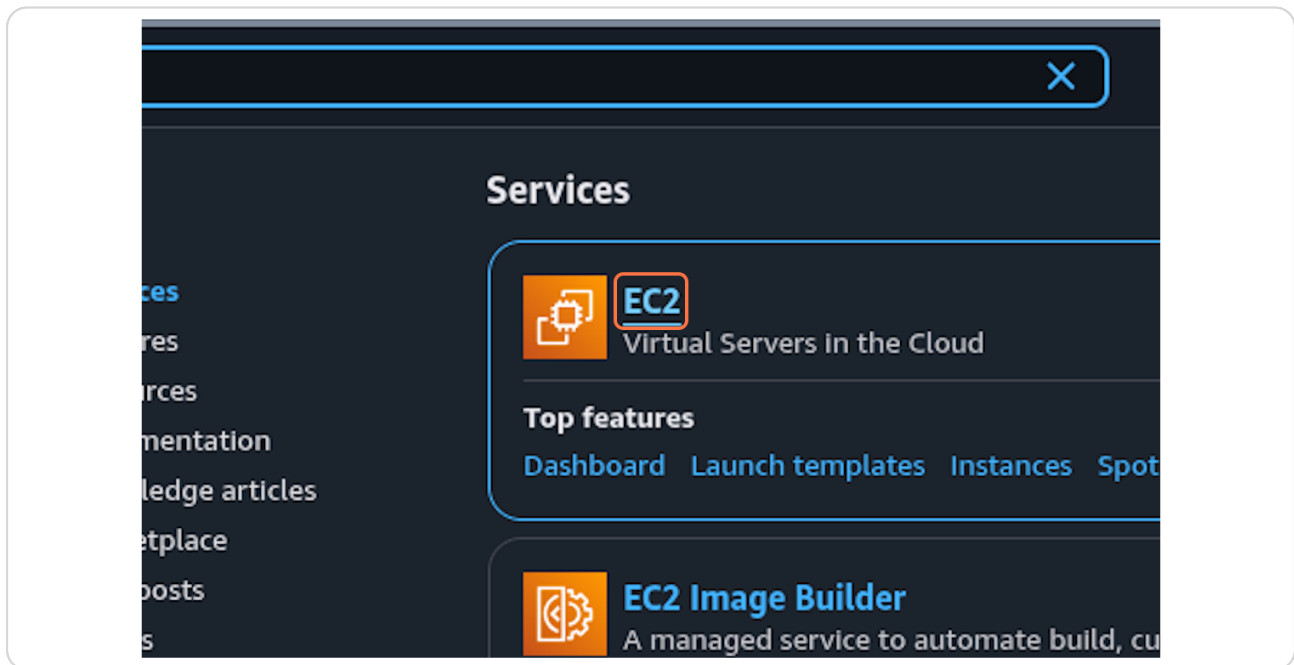

Dec 16, 2025

STEP 1

Type "EC2"

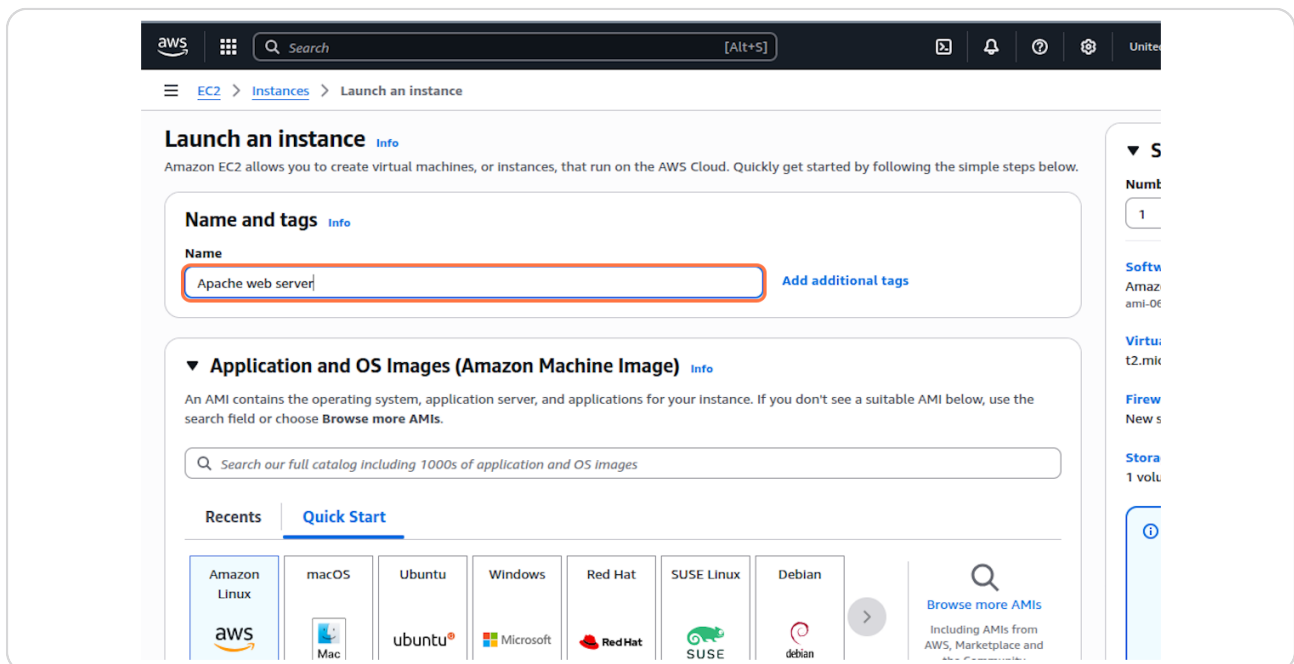

STEP 2

Click on EC2

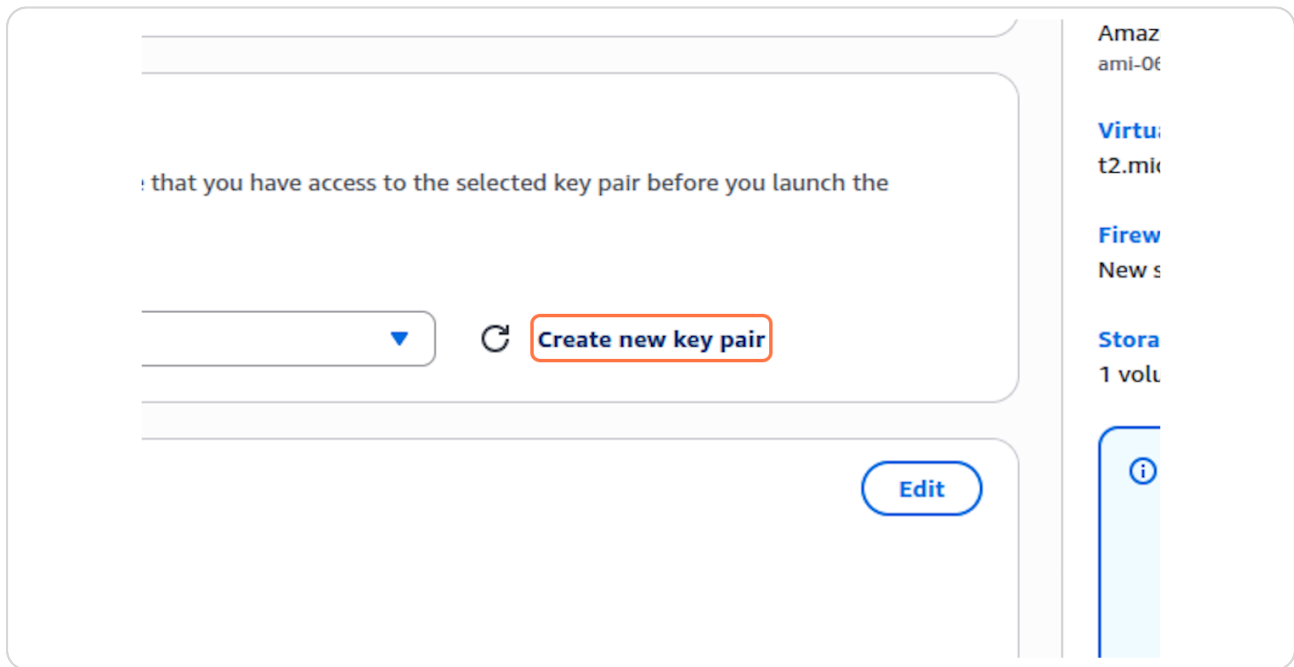

STEP 3

Type "Apache web server"

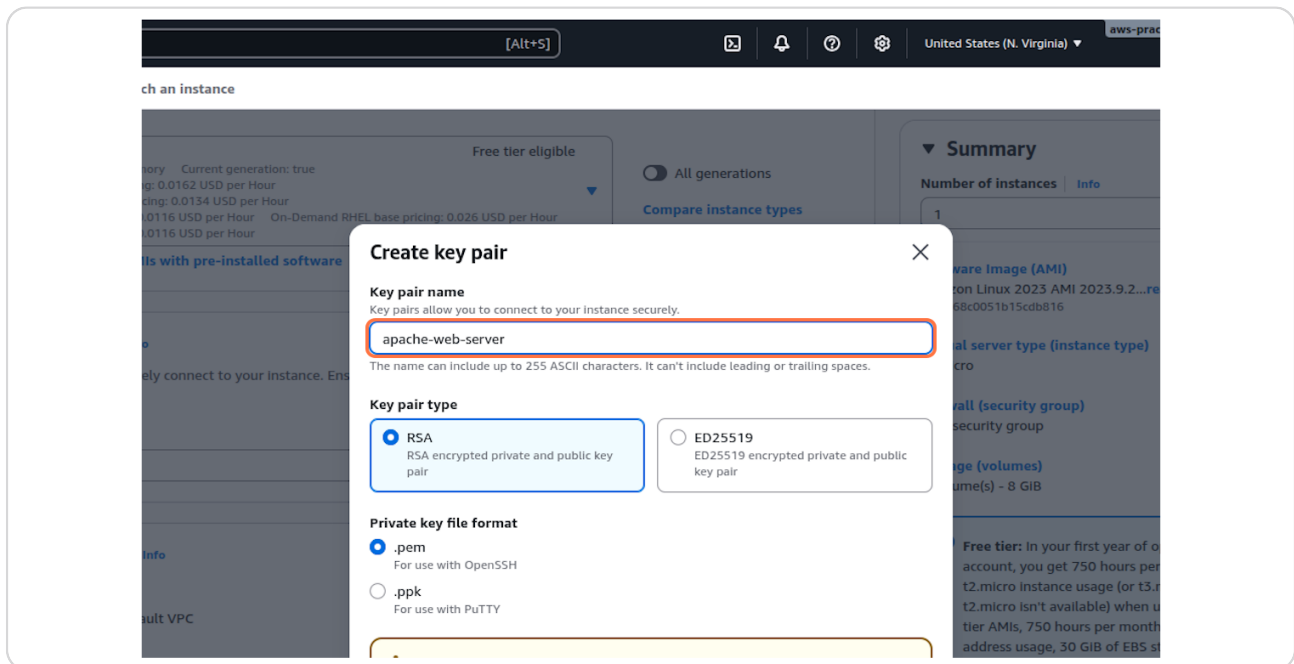

STEP 4

Click on Create new key pair

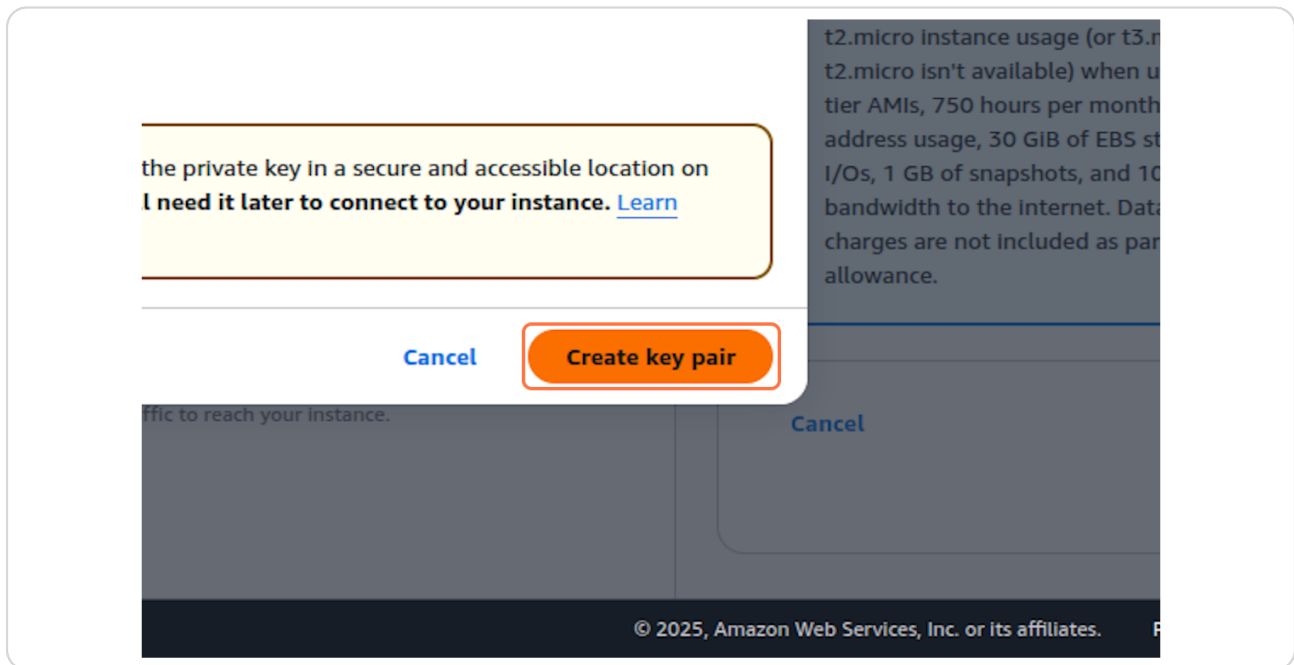

STEP 5

Type "apache-web-server"

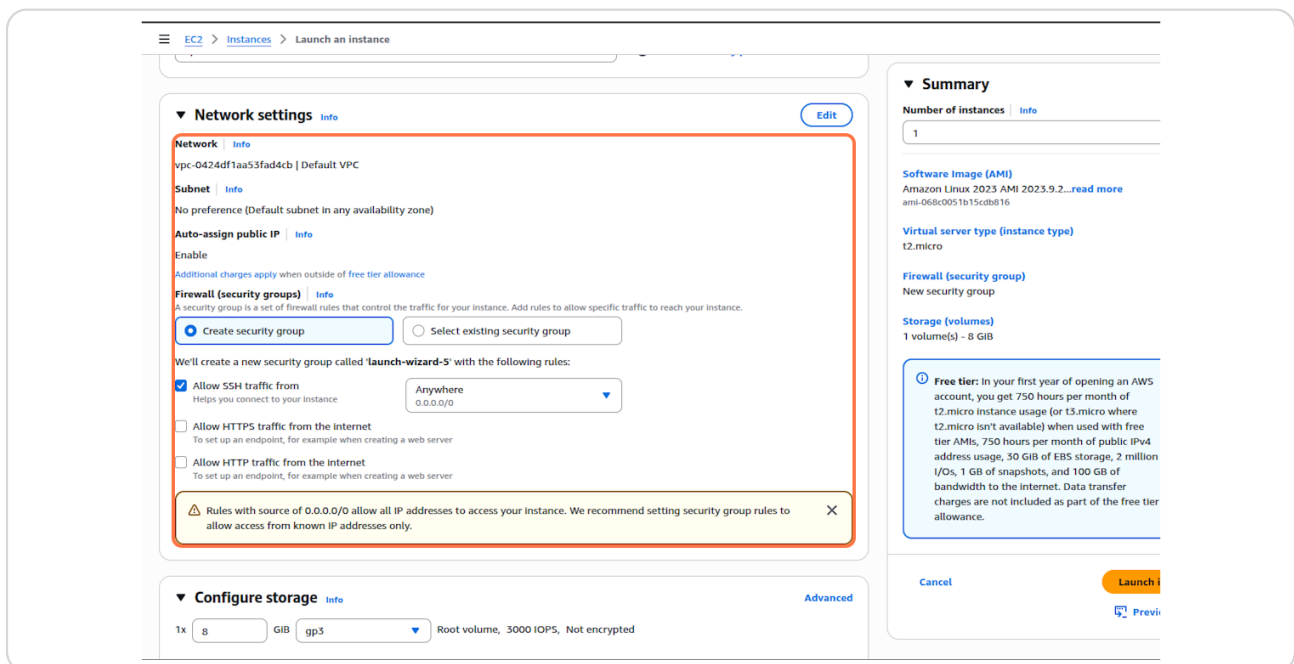

STEP 6

Click on Create key pair

STEP 7

Click on Network settings

STEP 8

Check Allow HTTP traffic from the internet

We'll create a new security group called **'launch-wizard-5'** with the fo

- ☒ Allow SSH traffic from
Helps you connect to your instance Anywhere
0.0.0.0/0
- ☐ Allow HTTPS traffic from the internet
To set up an endpoint, for example when creating a web server
- ☒ Allow HTTP traffic from the internet
To set up an endpoint, for example when creating a web server

 Rules with source of 0.0.0.0/0 allow all IP addresses to access y
allow access from known IP addresses only.

STEP 9

Click on Launch instance

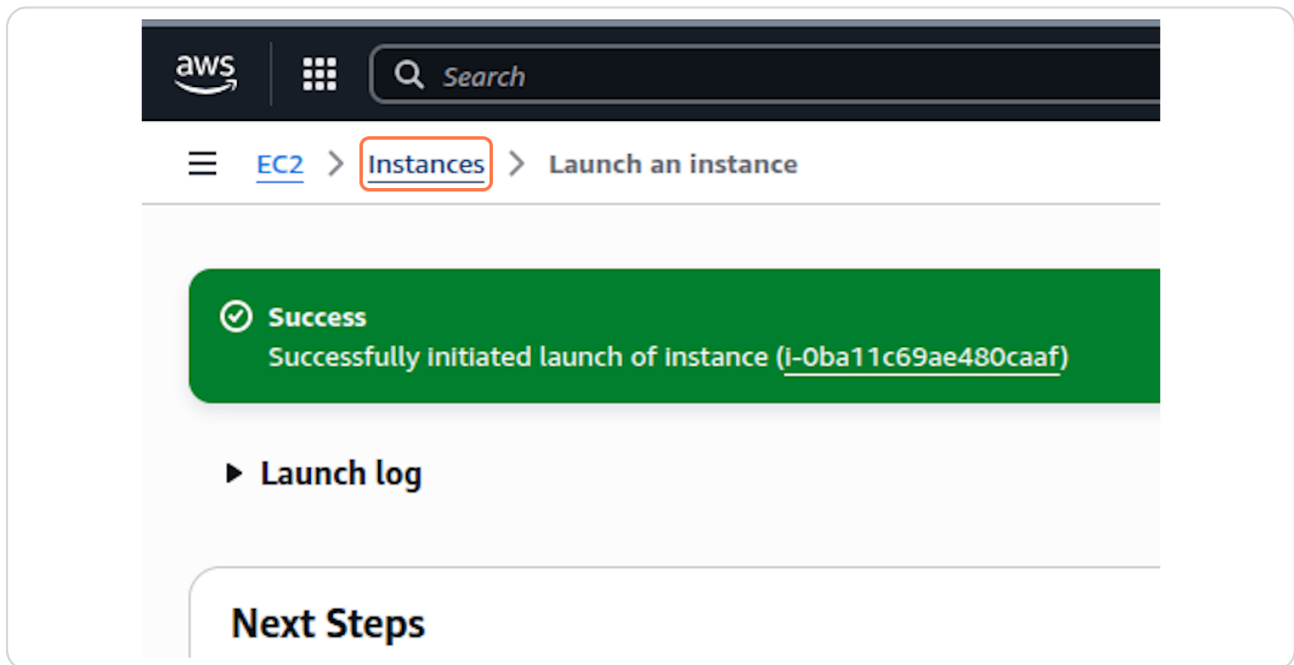

re not included as part of the free tier

Launch instance

 [Preview code](#)

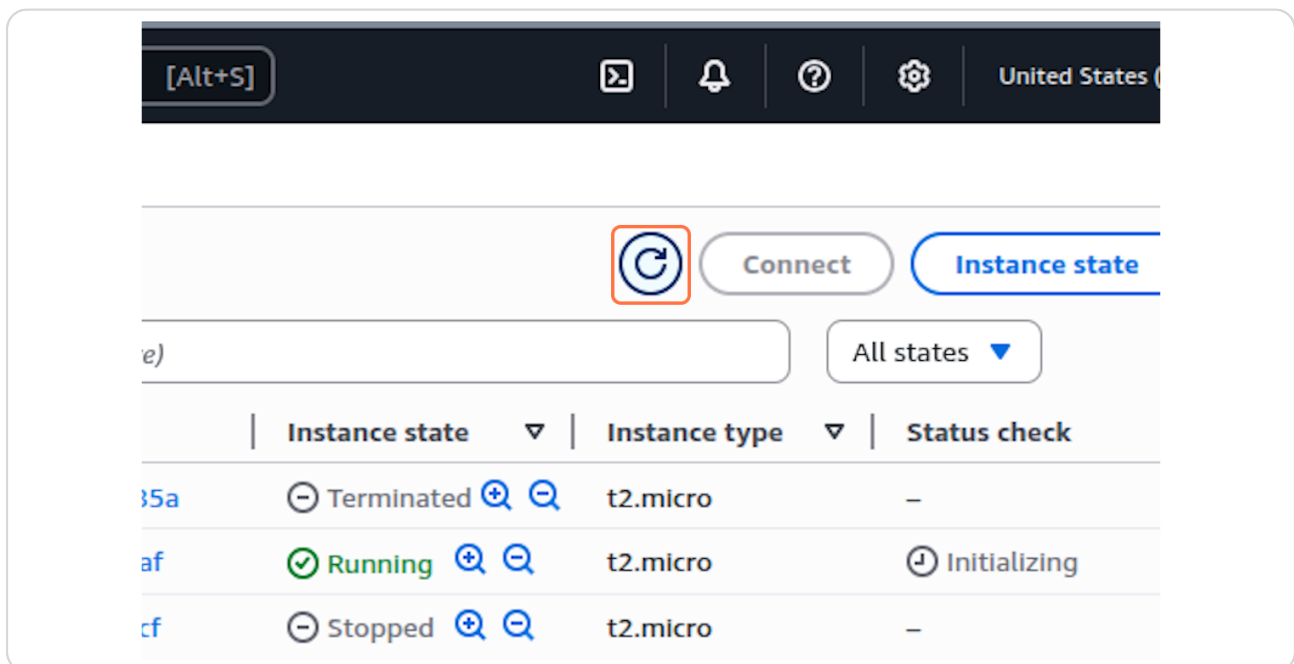

STEP 10

Click on Instances

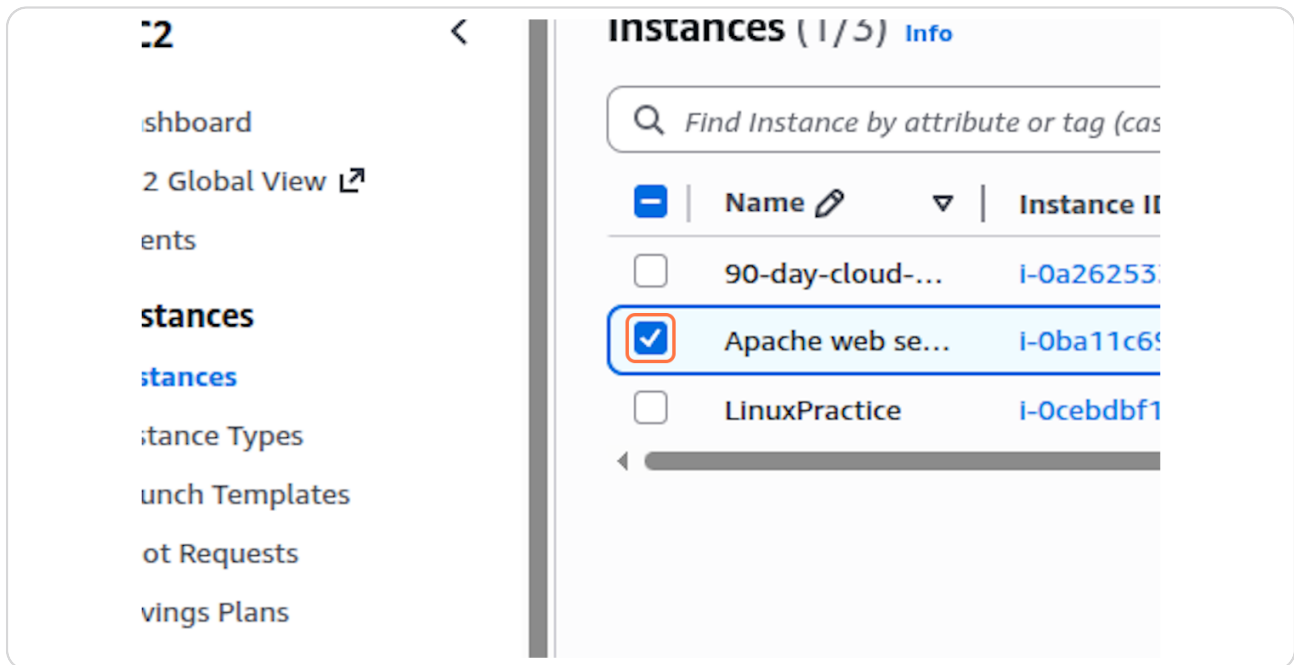

STEP 11

Click on Refresh instances

STEP 12

Check on

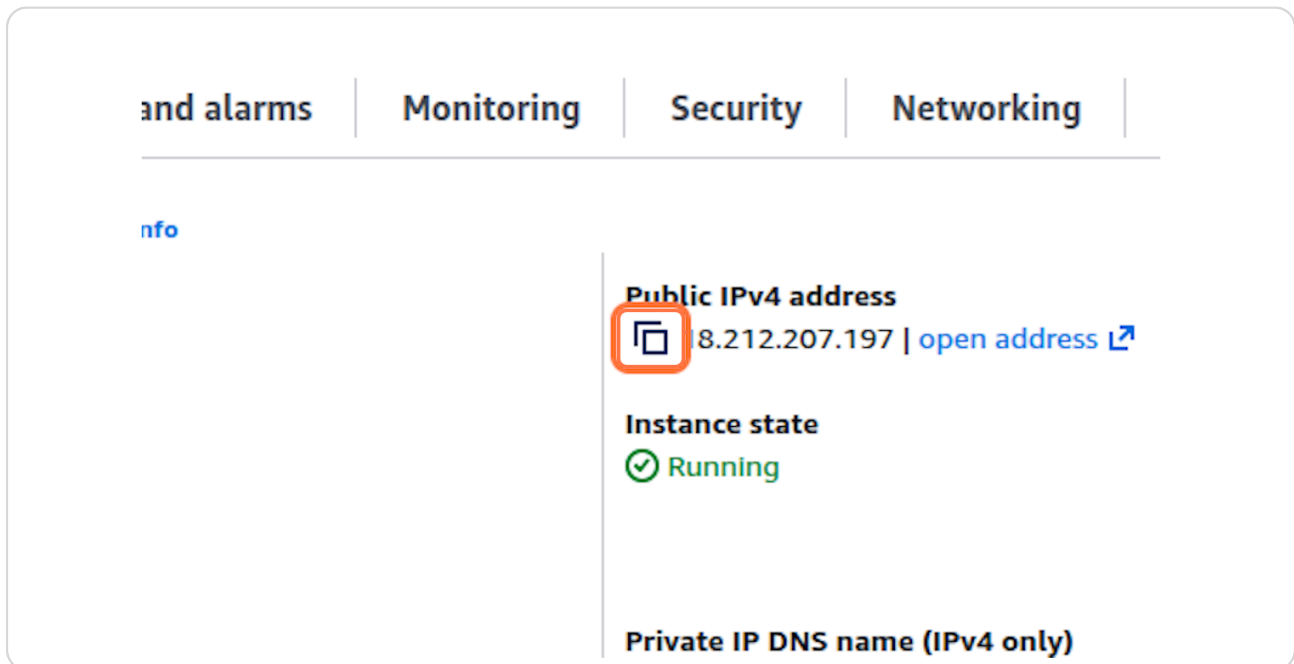

The screenshot shows the AWS Management Console's EC2 Instances page. On the left, a sidebar contains navigation links: 'Dashboard', '2 Global View', 'Instances', 'Instance Types', 'Launch Templates', 'Spot Requests', and 'Savings Plans'. The main content area is titled 'Instances (1/5)' with an 'Info' link. Below the title is a search bar and a table of instances. The table has columns for 'Name' and 'Instance ID'. The instance 'Apache web se...' is selected, indicated by a blue checkmark in a box. Below the table, there is a horizontal scrollbar. The 'Info' tab is active, showing details for the selected instance.

Name	Instance ID
90-day-cloud-...	I-0a26253...
Apache web se...	I-0ba11c69...
LinuxPractice	I-0cebdbf1...

STEP 13

Click on Copy public IPv4 address to clipboard

The screenshot shows the details of an EC2 instance in the AWS Management Console. The 'Monitoring' tab is selected. The 'Public IPv4 address' is highlighted, and the 'Instance state' is 'Running'. The 'Private IP DNS name (IPv4 only)' is also visible.
