

Manage EC2 Instance and List S3 Buckets

17 Steps [View most recent version on Tango.ai](#) 

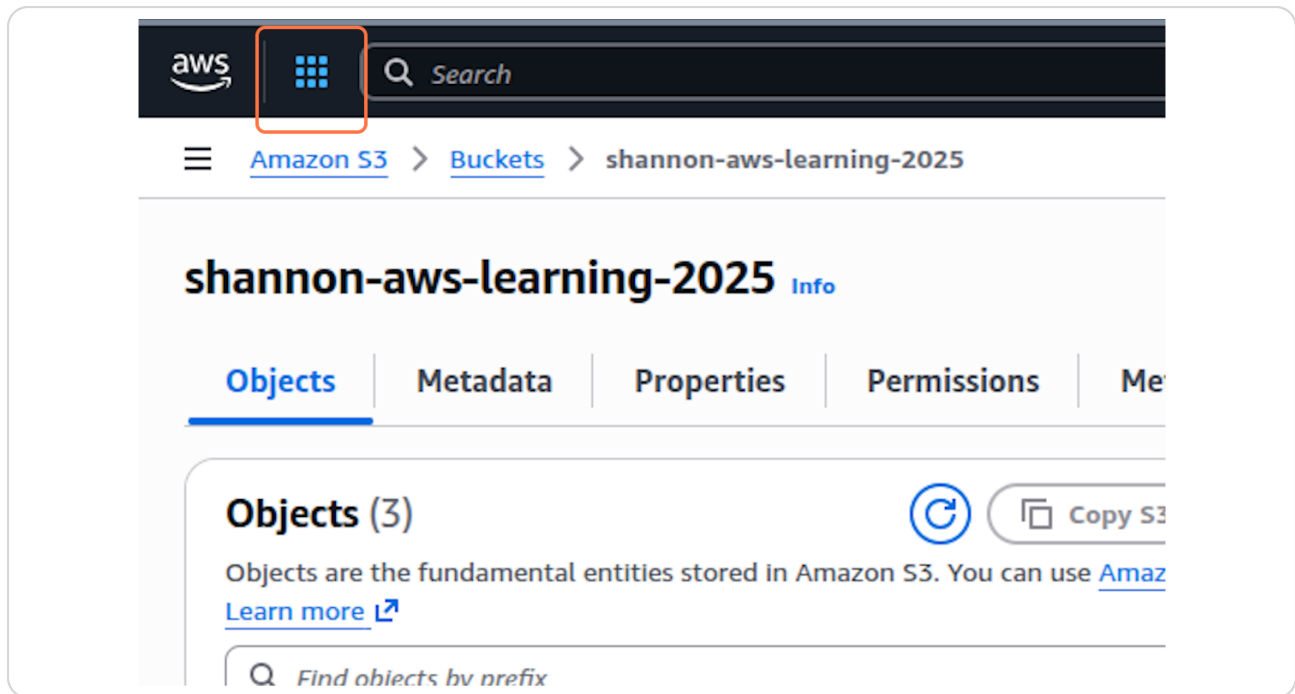

Created by	Creation Date	Last Updated
Shannon Posey	Dec 16, 2025	Dec 16, 2025

shannon-aws-learning-2025 - S3 bucket | S3 | us-east-1

17 Steps 

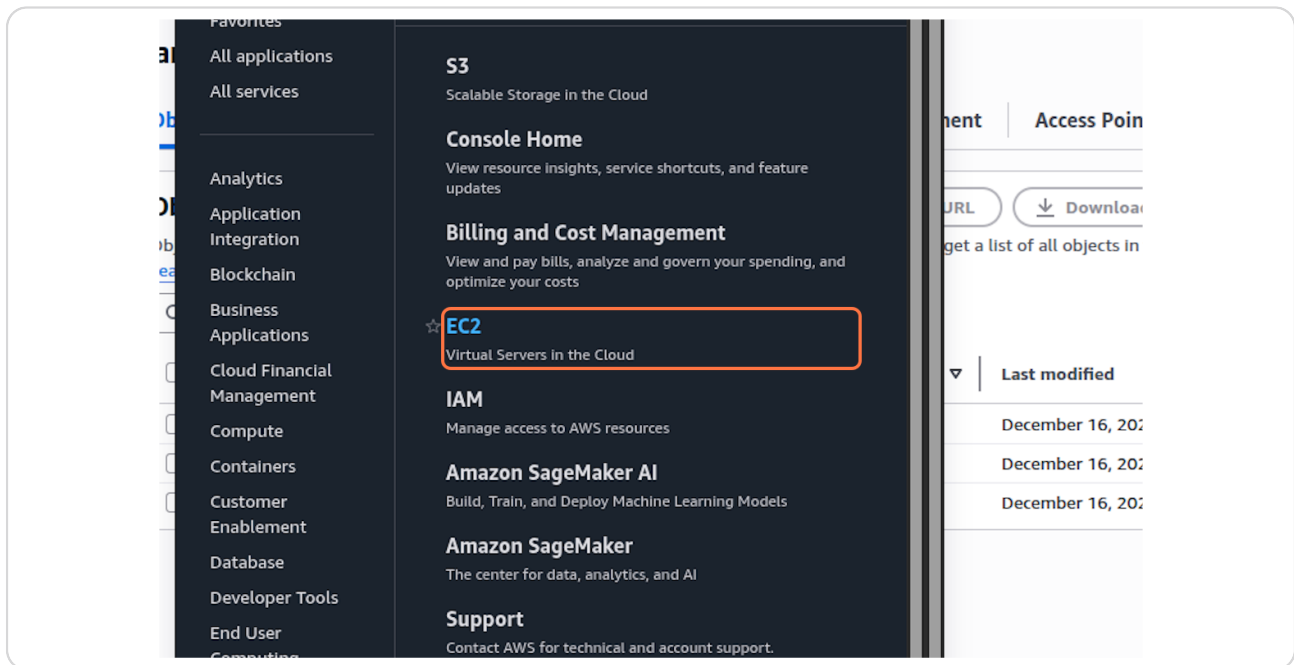

STEP 1

Click on Services

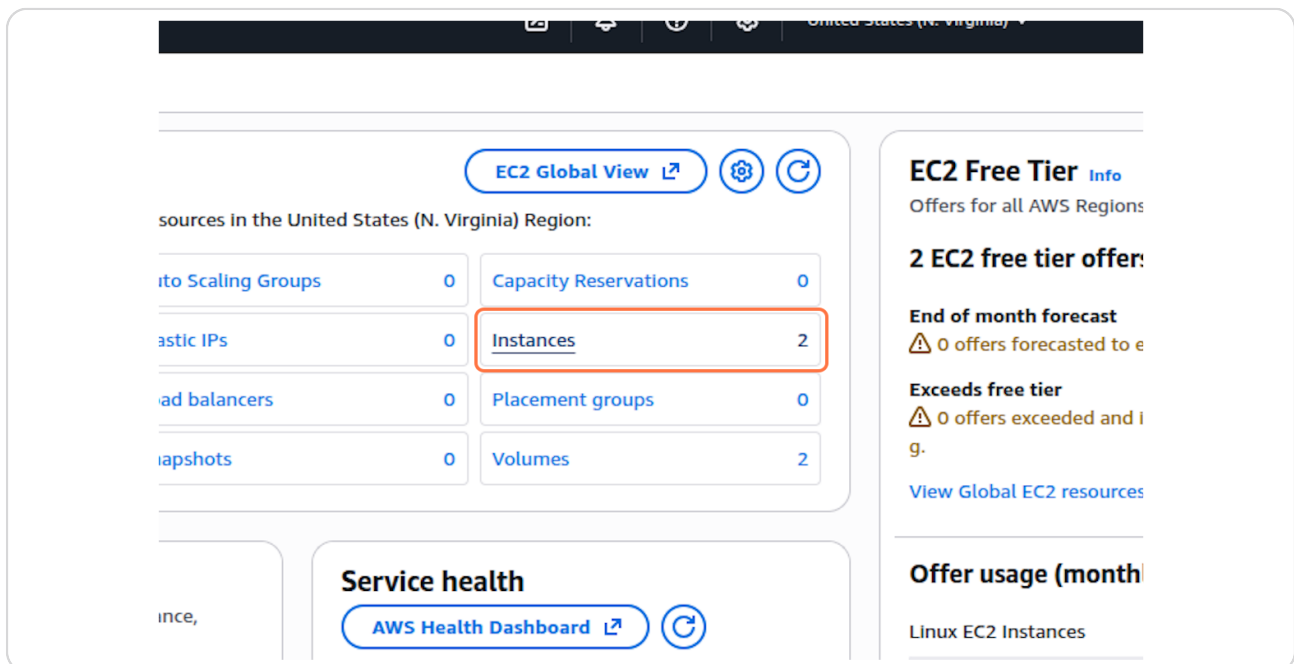

STEP 2

Click on EC2...

STEP 3

Click on Instances

STEP 4

Check on

The screenshot shows the AWS Management Console 'Instances' page. On the left, a sidebar contains navigation links: 'Dashboard', '2 Global View', 'Instances', 'Instance Types', 'Launch Templates', 'Spot Requests', 'Savings Plans', and 'Reserved Instances'. The main content area is titled 'Instances (1/2)' with an 'Info' link. Below the title is a search bar with the placeholder text 'Find Instance by attribute or tag (case sensitive)'. A table lists instances with columns for a selection checkbox, 'Name', and 'Instance ID'. The 'LinuxPractice' instance (ID: i-0cebdbf1) is selected, indicated by a blue checkmark in the checkbox and a red rectangle around the row. The 'Apache web se...' instance (ID: i-0ba11c69) is also listed but not selected.

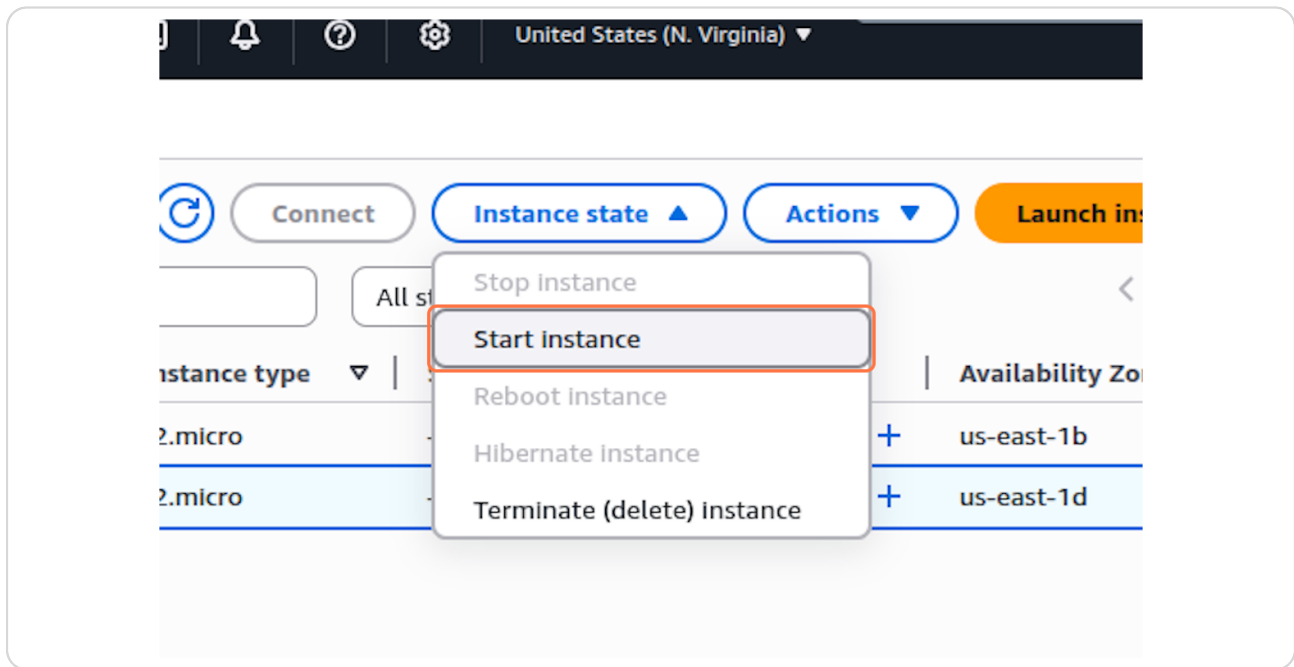

STEP 5

Click on Instance state

The screenshot shows the 'Instance state' dropdown menu in the AWS Management Console. The top navigation bar includes icons for a dashboard, notifications, help, and settings, along with the region 'United States (N. Virginia)' and the account name 'aws-practice-explo'. Below the navigation bar, there are buttons for 'Connect', 'Instance state' (highlighted with a red rectangle), 'Actions', and 'Launch'. A dropdown menu for 'All states' is visible. Below these buttons is a table with columns: 'Instance type', 'Status check', 'Alarm status', and 'Availability zone'. The table contains two rows, both for 't2.micro' instances in 'us-east-1' with a status check of '-' and a link to 'View alarms +'. The second row is highlighted with a blue background.

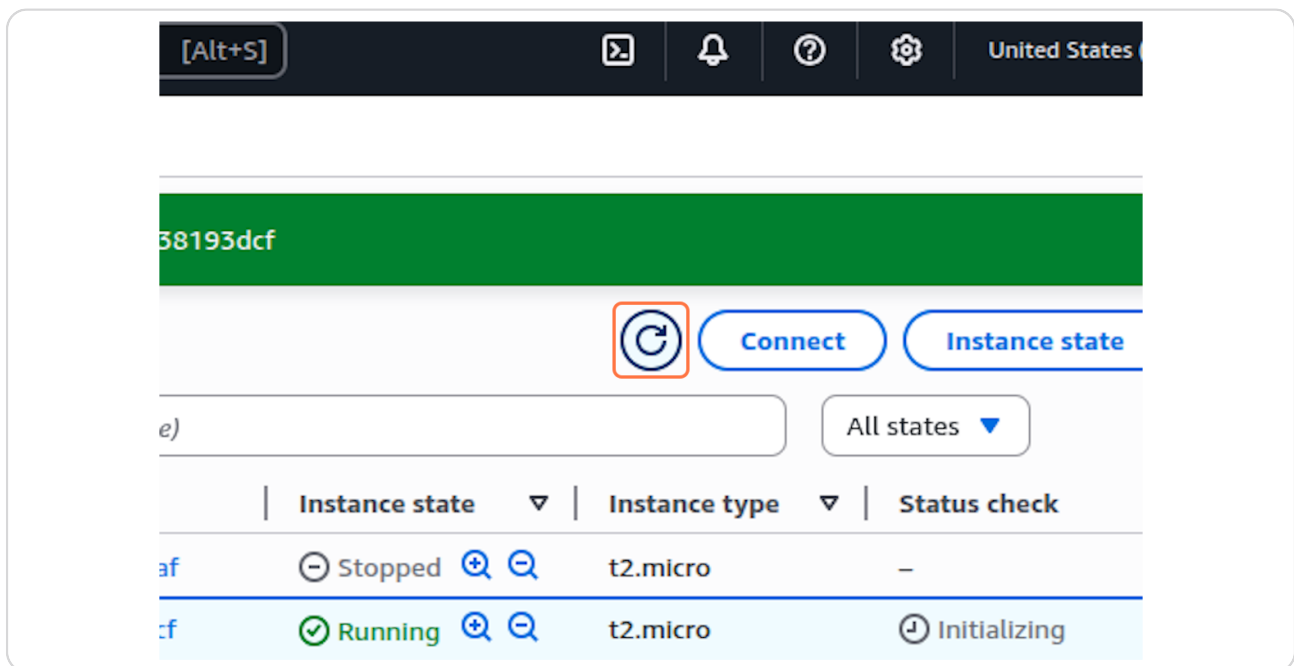

STEP 6

Click on Start instance

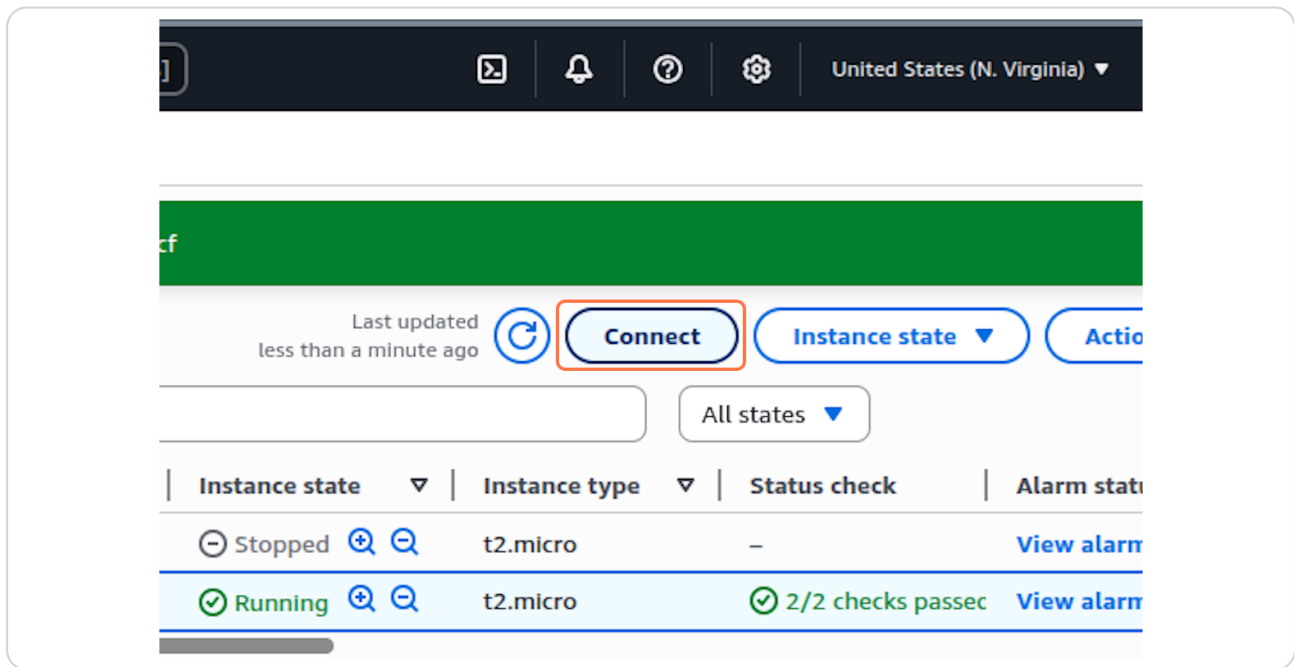

STEP 7

Click on Refresh instances

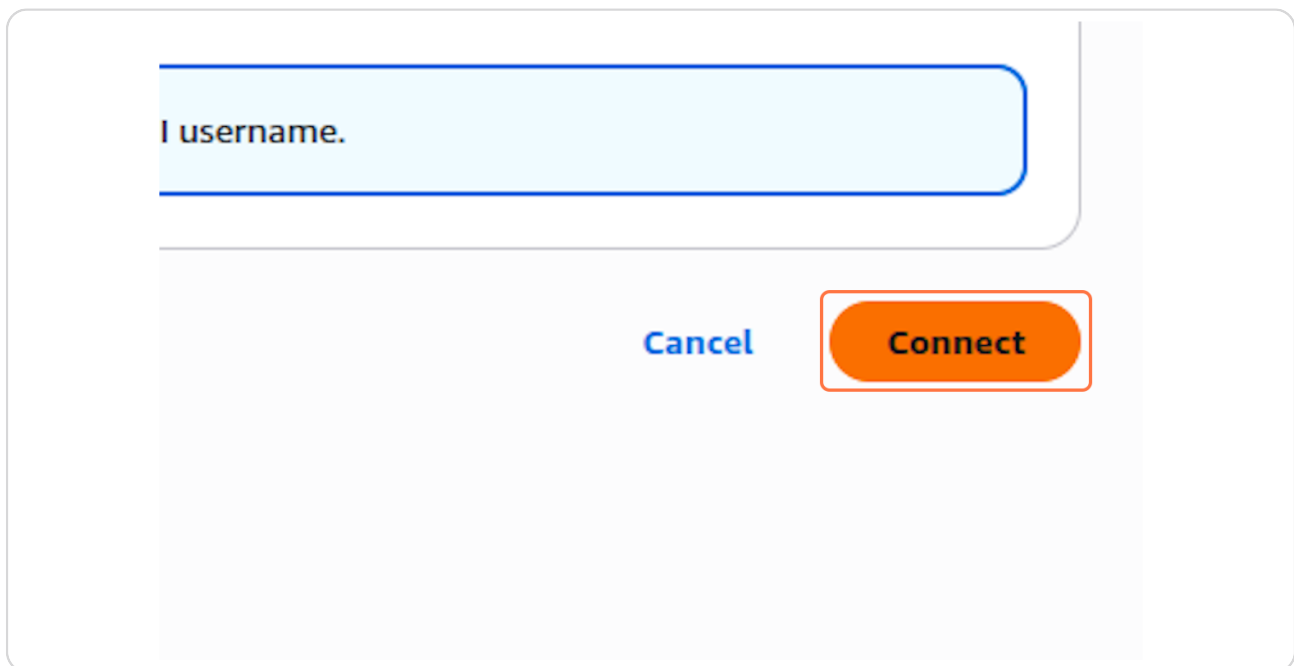

STEP 8

Click on Connect

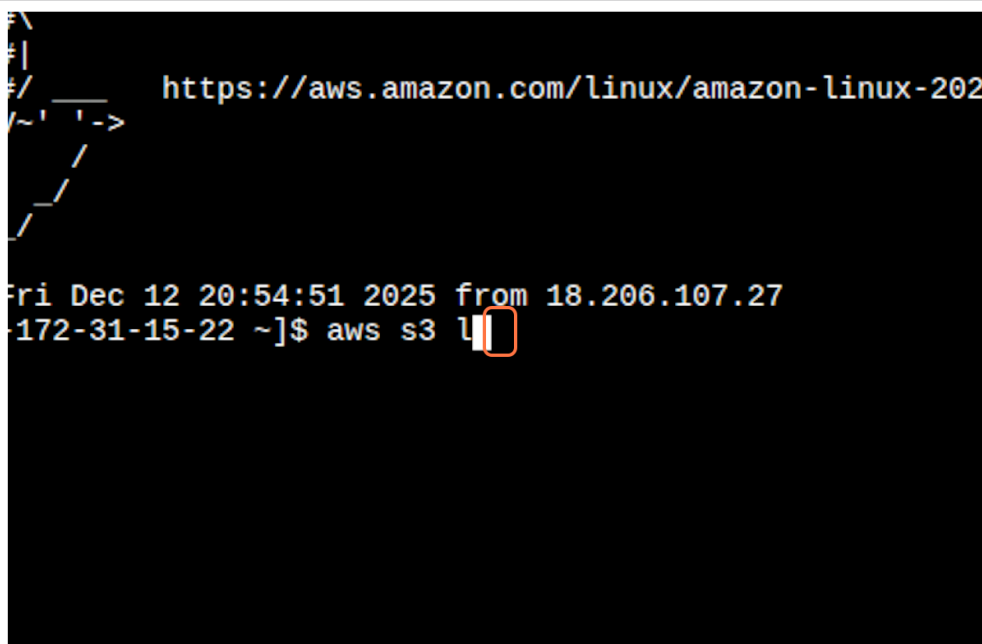

STEP 9

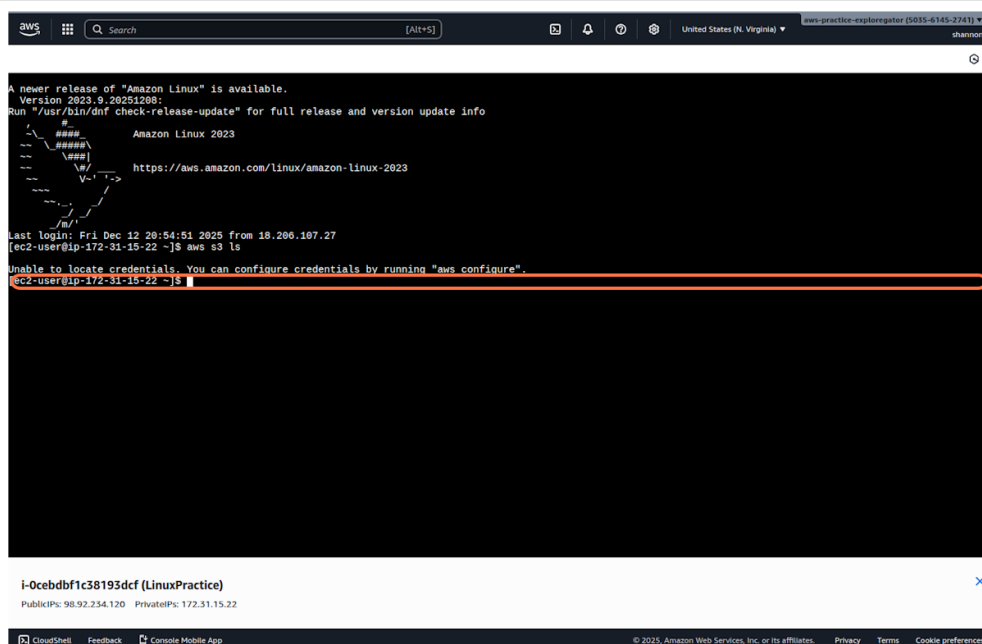

Click on Connect

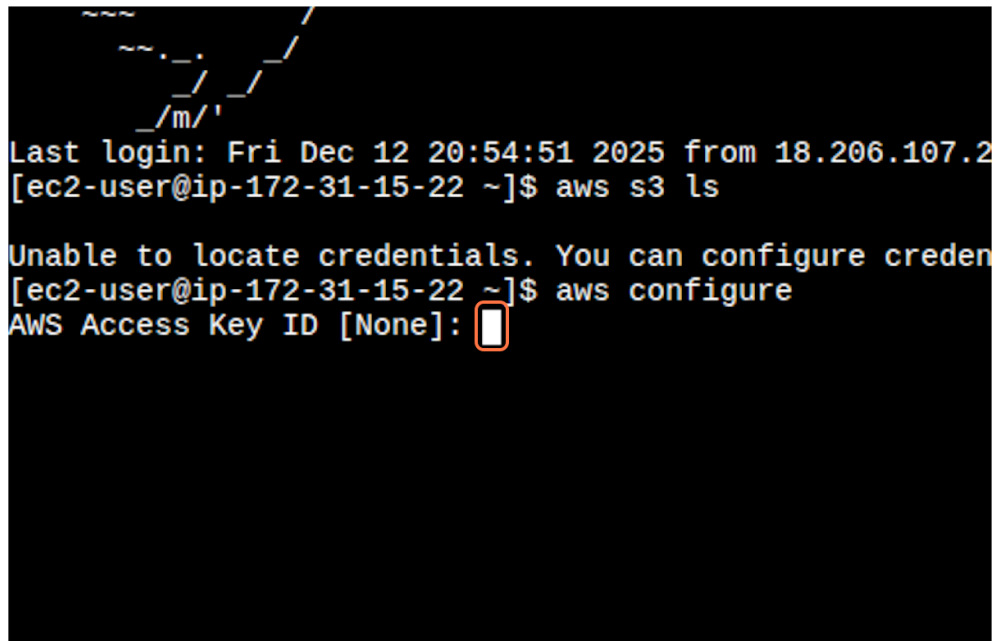

Type "aws s3 ls"

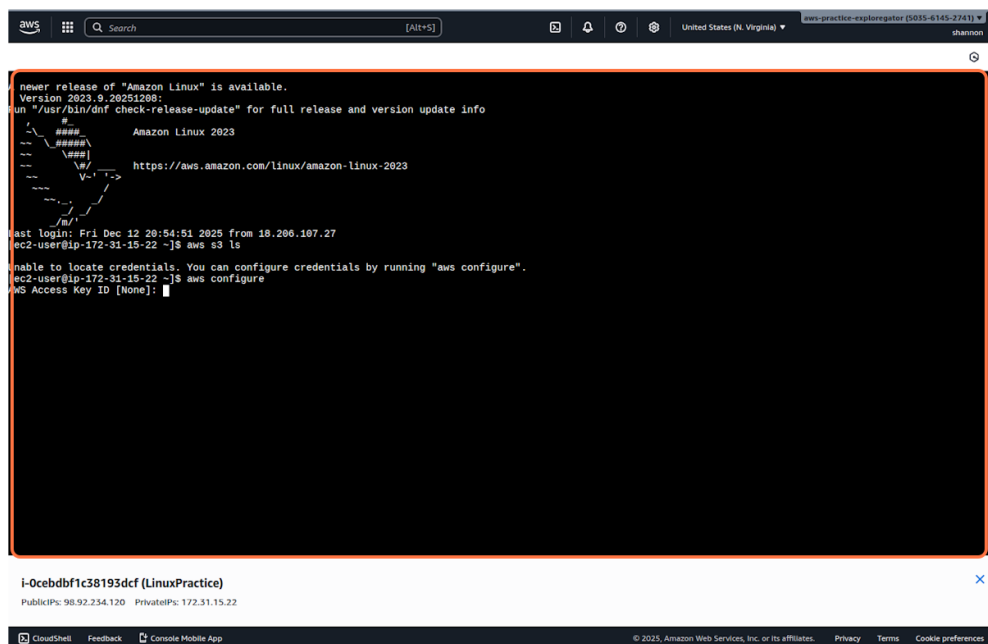

Click on [ec2-user@ip-172-31-15-22 ~]\$

Type\$ {label}

Right click on A newer release of "Amazon Linux" is available....

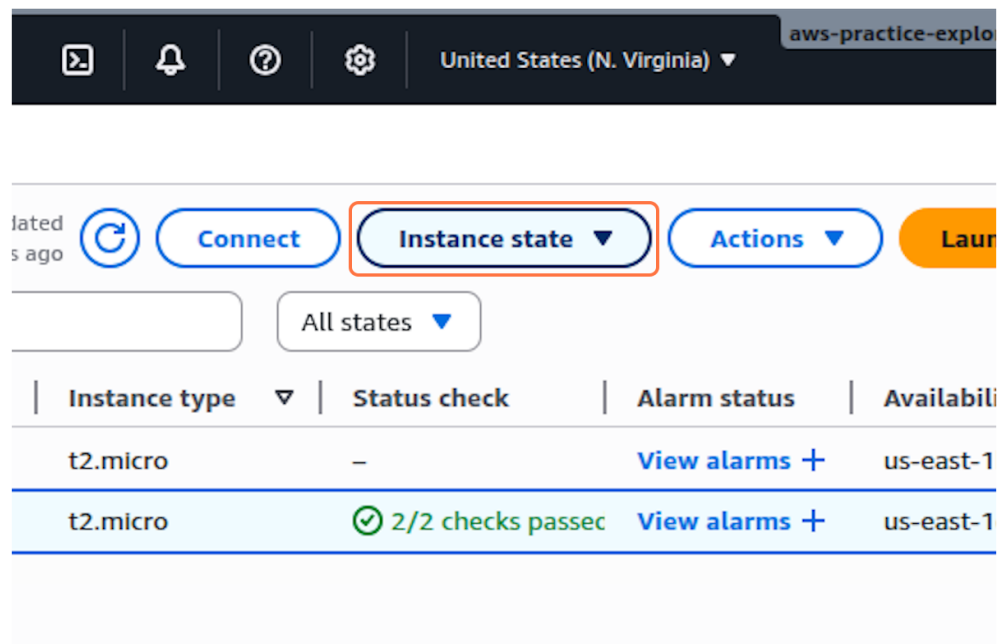

STEP 14

Type\$ {label}

```
2-user@ip-172-31-15-22 ~]$ aws configure
Access Key ID [None]: AKIAXKPUZ7TC5GDEEBXQ
Secret Access Key [None]: k/qHbTb4htP0JBvTAbg0uDQo9wsq
Default region name [None]: us-east-1
Default output format [None]:
2-user@ip-172-31-15-22 ~]$ aws s3 ls
2025-12-03 17:53:06 permission-test-bucket-2741
2025-12-16 15:12:05 shannon-aws-learning-2025
2025-02-03 13:45:13 shannon-first-bucket
2-user@ip-172-31-15-22 ~]$
```

STEP 15

Click on Instance state

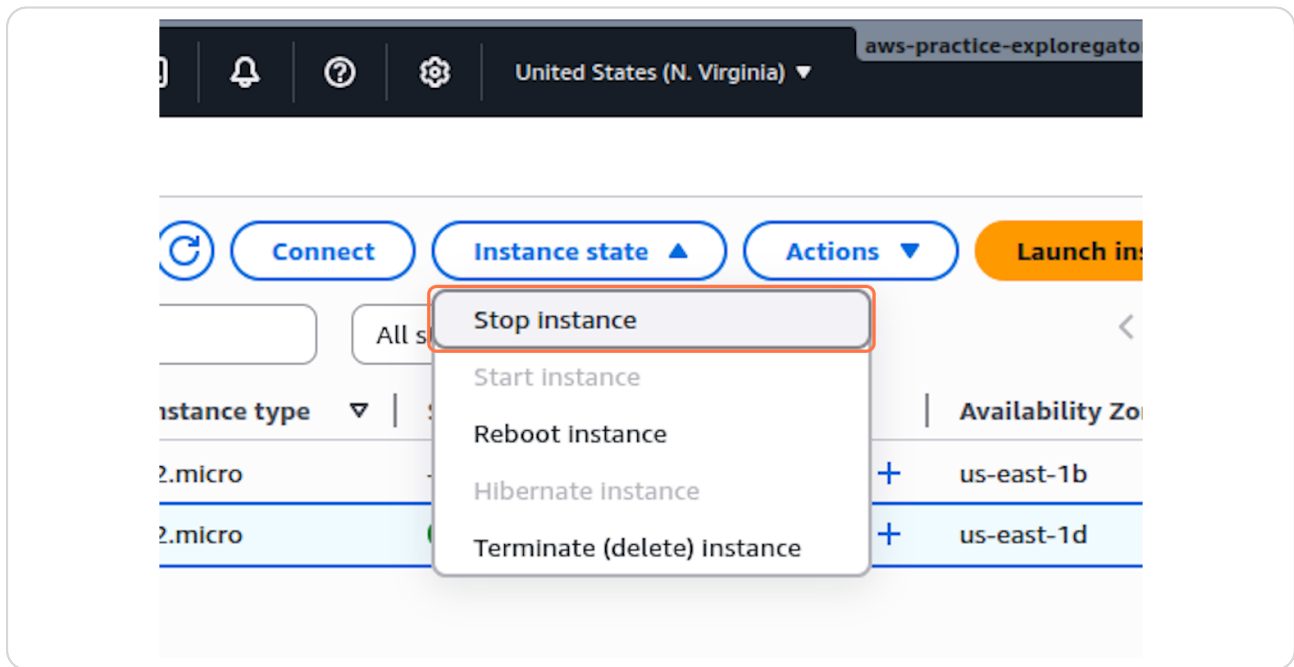

The screenshot shows the AWS Management Console interface. At the top, there is a navigation bar with icons for home, notifications, help, and settings, followed by the region 'United States (N. Virginia)' and a tab labeled 'aws-practice-explo'. Below the navigation bar, there is a section for instance management. It includes a 'Refresh' button, a 'Connect' button, a dropdown menu labeled 'Instance state' (which is highlighted with a red box), an 'Actions' dropdown, and a 'Launch' button. Below this, there is a filter dropdown set to 'All states'. A table displays instance details with columns: 'Instance type', 'Status check', 'Alarm status', and 'Availability zone'. The table contains two rows for 't2.micro' instances in 'us-east-1'. The first row shows a status check of '-', while the second row shows a green checkmark and '2/2 checks passed'.

Instance type	Status check	Alarm status	Availability zone
t2.micro	-	View alarms +	us-east-1
t2.micro	✓ 2/2 checks passed	View alarms +	us-east-1

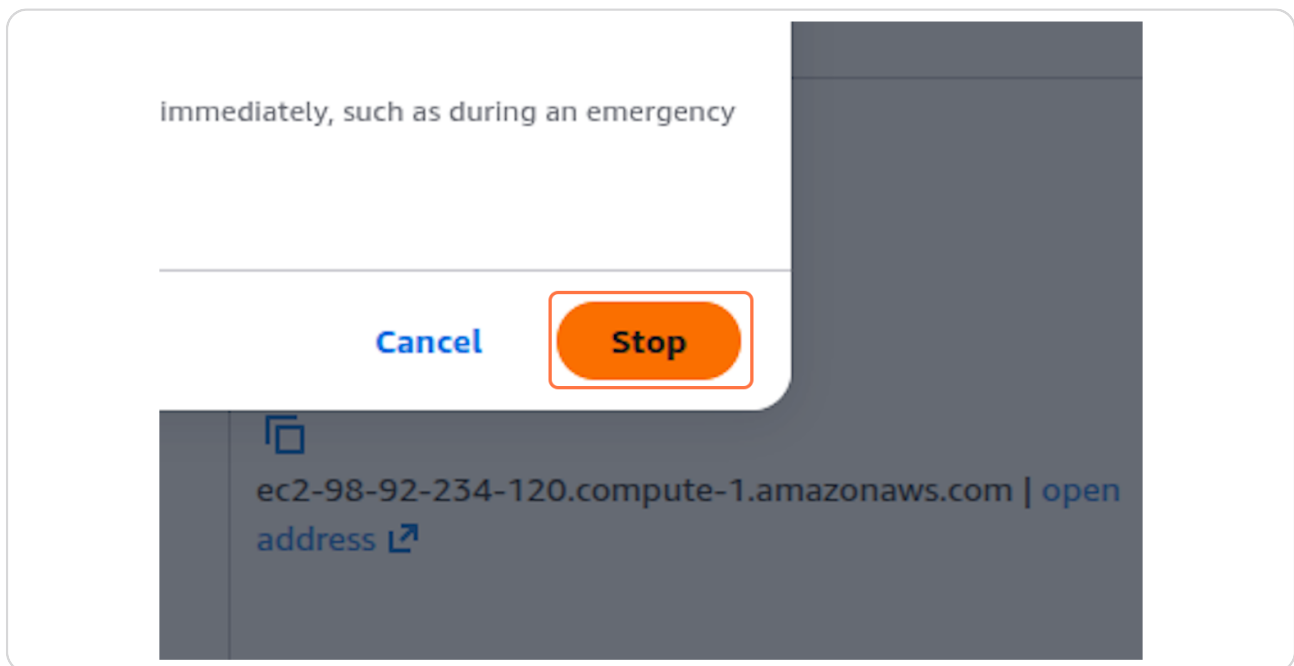

STEP 16

Click on Stop instance

STEP 17

Click on Stop
